

Vehicle Tracking Solution Think "Outside the Box"

Pete Desiderio
November 2010

Over the last couple of years the economy has been in the forefront of the news just about every day. As a result, we have been worrying more and more about how we spend our money. What resources do we invest in? How can I lower my business expenses and get the same results? How do I remain profitable?

Recently, more and more executives and managers of companies have been turning to technology to help alleviate these troubling questions. Among technologies like dispatch programs, on board vehicle camera systems and vehicles enabled with navigation, GPS tracking services are becoming widely accepted as a means to face these challenges.

This past November, Candace Roulo of ContracorMag interviewed Louis Doro of Clean Air Quality Service, and a customer of Vehicle Tracking Solutions. **"We first started out with using GPS on six of our vehicles and within the first month of using the system it basically paid for itself," said Doro.** "We now have it on about 24 of our vehicles. We wish we would have done it years earlier; the savings alone pays for itself every month. Our overtime has dropped even though the volume of work has gone up. It definitely makes a more productive staff."

If you have vehicles out on the road; and are looking to keep track of productivity, please contact me with any questions.

See you next month!
