

Did You Know?

Facts About Life Spans

Marie Cantone
September 2009

Our projected life span has been increasing over the past decade

because of many reasons. One primary reason is advances in medical care.

Let's take a look at the projected life span for a female (Sorry guys your life expectancy is shorter than ours.....but when it comes to disability you are less likely to be disabled so you have us there.)

Age	Life
Expectancy*	
30	81.05
40	81.46
50	82.25
60	83.53
70	85.72
80	89.22

Some of us will live well beyond our life expectancy and, of course, some of us won't live that long. If we want to have a "good" retirement, it is critical that we are cognizant of our life expectancy and plan accordingly. It is NEVER too early or too late to start your planning.
